

Non-Hazardous Medical Waste to Energy Service

Program Description

The following steps are integral to the program.

1. Place your order for an ENT/Urology Pak, or your Broncho Pak. Each Pak contains 5 Boxes and each BOX will accept up to 40 scopes for incineration.
2. You will receive your Boxes flat packed, with attached pre-printed shipping labels. Just assemble your boxes and you're ready to go.
3. Once assembled, add a collection bag in the box or another user provided container in your collection area. Insert a collection bag in this container and add all material from packaging, to the scope in this container. 40 Scopes Max.
4. Once at 40 scopes, Insert collection bag in the provided cardboard box...or if you have used the box already just close up.
5. Contact FedEx us to arrange BOX pickup. Box will be picked up and delivered to the sustainable energy site. Box will be processed, and we will be issued a Destruction certificate. This validates your loop in the sustainability process.
6. Confirm with us that you have your next boxes ordered and shipped and ready for use.

Turning Non-Hazardous Medical Waste, that was originally destined for the landfill, into a sustainable resource. By using a waste to energy system, it's combusted generating steam for electricity. The ash is processed to recover metals for recycling, while all gases are collected, filtered and then cleaned to minimize the environmental footprint.

For every TONNE of solid waste processed, we reduce greenhouse gases by up to ONE TONNE as well. Sustainable environmental impact by your actions.

Annual North American Waste to Energy Statistics:

Reduce 21 Million Tonnes of Greenhouse Gas Emissions

Continuously Power 1 Million Homes

Re-Cycle 600,000 Tonnes of Metal
